## Management of untoward symptoms at the end of life

Presented By
Richard McKenzie BSN RN
Educational Specialist
Beaumont Home services

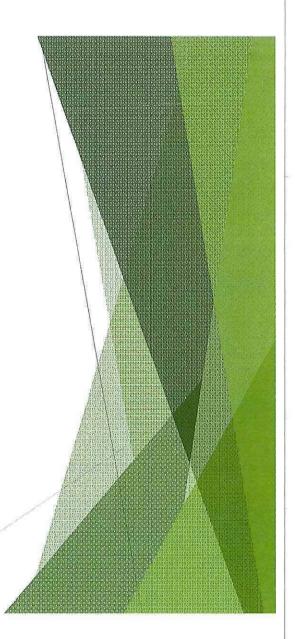

#### Disclosures

- Richard McKenzie does not have any financial relationships that create or may be perceived as creating a conflict related to this educational activity
- ► The use of off-label drugs, common in pain management, will be discussed.
- Criteria for successful completion include attendance at the entire event and submission of a completed evaluation form.

#### Objectives

- Identify common untoward symptoms that occur at the end of life
- ▶ List the assessing symptoms
- ▶ Describe Pharmacologic and non-pharmacologic symptom management therapies.

#### Introduction and Overview

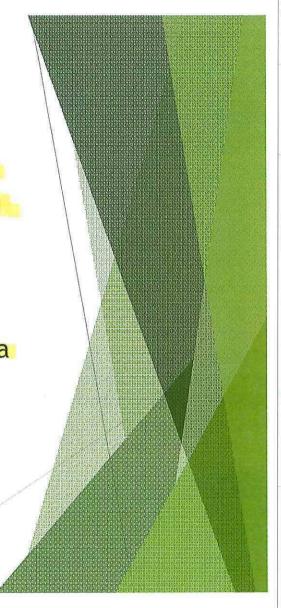

- ▶ As people travel through the last part of their life's journey, they tend to go through similar stages
- Recognizing these changes can help us be prepared, and can help us prepare the families for whom we care
- Each death we encounter tends to cause us to confront our own experiences with death
- Dealing with our own death experiences may help us take better care of our patients who are dying

#### Core Principles for End-of-Life Care

- Respect and dignity for both the patient and their family
- Be sensitive to and respectful of the patient's and family's wishes
- Use the most appropriate measures that are consistent with patient choices
- ► Alleviate pain and other physical symptoms
- Assess and manage psychological, social and spiritual or religious concerns

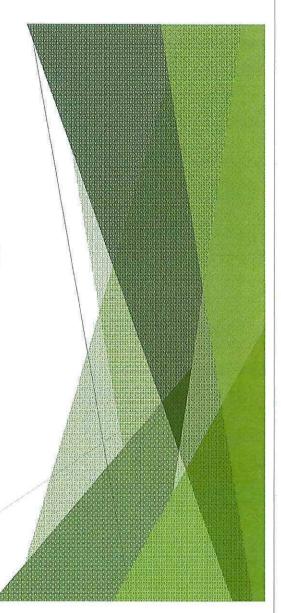

#### Patient and Family

- As health care professionals we may be familiar with the process of dying but our patient's families most likely are not.
- It is our job to prepare the families for what to expect and what we are doing for their loved one.
- Explain what is normal and expected and what would be a sign of distress or untoward symptom.
- Then re-explain as needed and give support to them. Listen carefully for their fears and misunderstandings.

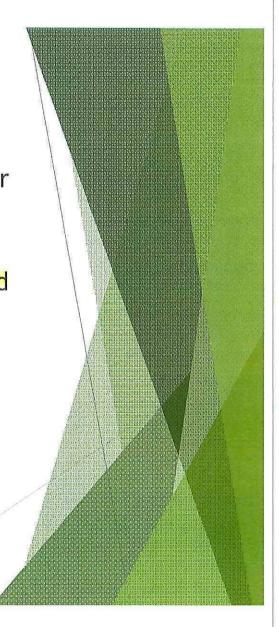

#### **Nutrition and Hydration**

- ▶ As the end of life nears organs begin to fail. Due to the multisystem failure the patient will not tolerate food and fluid.
- Hydration (PO and IV) may hasten heart failure and increase edema and pulmonary congestion
- Digestion and peristalsis is slowed as blood is diverted away from the GI tract and food is not tolerated. Swallowing becomes difficult and or lost. The potential for nausea, vomiting with aspiration is increased.

#### A new way to nurture

- ▶ In all cultures feeding someone is the way we nurture. For families seeing their loved one not eating/drinking feels wrong and distressing to them.
- Not only explain the rational for not forcing food and fluid but help them to see other ways to nurture.
  - ▶ Being present
  - ▶ Reading to them
  - ► Soft music
  - ▶ Oral care
  - ► Moist compresses
